

FOREWORD

These proceedings, of the 7th International School and Workshop on Quantum Field Theory and Hamiltonian Systems, Călimănești-Căciulata, Romania, 10-15 May 2010, are dedicated to Professor Marc Henneaux from Université Libre de Bruxelles, a distinguished personality of Theoretical Physics today. The present edition of this school and workshop debuted with a special event: University of Craiova conferred the Doctor Honoris Causa degree to Professor Marc Henneaux.

Like in all previous editions, the contributors describe their research in the basic fields of Theoretical Physics and Dynamical Systems. Individual paper topics are dedicated to the idea that the interplay between Physics and Mathematics yields a better understanding of Nature and creates a fruitful framework for the study of Universe.

Organized by the Faculty of Physics from the University of Craiova jointly with SEENET-MTP, under aegis of the Romanian Physics Society, this edition benefited also from the financial support of UNESCO Venice Office.

All invited lessons and workshop talks were intended to a large audience of specialists, but not only. The morning and afternoon sessions were followed by exercise meetings, especially conceived for master and Ph.D. students in Physics and Mathematics.

Apart from their main scientific preoccupations, the participants had the opportunity to exchange ideas on the future of Physics research, education, and funding. They eventually converge at a unique point: mathematicians and physicists working in the field of Theoretical Physics portray to a great extent the idealistic scientist, designed for the previous century, but creating the next one. Enjoyable moments were spent during the trips organized in the neighborhood region.

Both organizers and editor express their sincere gratitude to all the contributors to these Proceedings for their cooperation in respect of time limitation, and accurate and patient preparation of their manuscripts in electronic form. Our acknowledgment is likewise made for the cooperation of several local and national institutions, business and economical organizations and societies as sponsors of this School and Workshop. Since so many people and sponsors helped us in so many ways at the preparation of this School and Workshop, we apologize in advance for possible omissions of names or institutions.

The Editor
